Knowledge-Based SYSTEMS

www.elsevier.com/locate/knosys

Subject Index of Volume 12

A knowledge framework in high school scheduling
A conceptual model of knowledge-based time-tabling system 81
Activated sludge
An advanced integrated expert system for wastewater treatment plants control 355
Active database
Implementing ECA rules in an active database 137
Adaptation
Vanishing windows: an approach to adaptive window management 381
Adaptive and customizable user interfaces
Intelligent multi-shot 3D visualization interfaces 403
Adaptive systems
Making systems sensitive to the user's changing resource limitations 413
Agents
COVERAGE: verifying multiple-agent knowledge-based systems 37
Let's browse: a collaborative browsing agent 427
Algebra
CG-SQL: a front-end language for conceptual graph knowledge bases 293
Algorithm
Using statistical models and case-based reasoning in claims prediction: experience from a real-world problem 239
Application of knowledge-based systems
The organisational impact of knowledge-based systems: a knowledge perspective 159
Architectural design
Large scale knowledge based systems for airborne decision support 215
Argumentation
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Artificial intelligence in medicine
Internet-based decision support for evidence-based medicine 247
Artificial intelligence
An advanced integrated expert system for wastewater treatment plants control 355
Artificial intelligence technology
Case-based reasoning is a methodology not a technology 303
Associate systems
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Association rules
MVC—a preprocessing method to deal with missing values 285
Automated software evaluation
ESSE: an expert system for software evaluation 183
Automated task allocation
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Automatic control
An advanced integrated expert system for wastewater treatment plants control 355

Backfitting procedure
Pruning boosted classifiers with a real valued genetic algorithm 277
Bayesian networks
Making systems sensitive to the user's changing resource limitations 413
The efficient estimation of missing information in causal inverted multiway trees 101
Body-in-white
Design engineering—a need to rethink the solution using knowledge based engineering 257
Browsing
Let's browse: a collaborative browsing agent 427

Camera planning
Intelligent multi-shot 3D visualization interfaces 403
Case-based reasoning
ACCELERE: a case-based design assistant for closed cell rubber industry 231
Using statistical models and case-based reasoning in claims prediction: experience from a real-world problem 239
Case-based reasoning is a methodology not a technology 303
Knowledge engineering issues in developing a case-based reasoning application 371
Casual-associational network
Applications of rule-base coverage measures to expert system evaluation 27
Causal networks
The efficient estimation of missing information in causal inverted multiway trees 101
Circularity
Approximate declarative semantics for rule base anomalies 341
Classification
Using Hellinger distance in a nearest neighbour classifier for relational databases 363
Closed cell rubber
ACCELERE: a case-based design assistant for closed cell rubber industry 231
Cockpit information management
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Collaboration
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Let's browse: a collaborative browsing agent 427

PII: S0950-7051(99)00045-3

Communications protocol
A web based CBR system for heating ventilation and air conditioning systems sales support 207
Computer aided design
Design engineering—a need to rethink the solution using knowledge based engineering 257
Conceptual graph
CG-SQL: a front-end language for conceptual graph knowledge bases 293
Configuration
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Configure-To-Order
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Contraints: Web-based tools
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Creativity
Retrospective analysis for knowledge-based idea generation of new artifacts 333
CTO
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223

Data mining
On rule interestingness measures 309
Dataset
Using statistical models and case-based reasoning in claims prediction: experience from a real-world problem 239
Decision trees
On mapping decision trees and neural networks 95
Strategic induction of decision trees 269
MVC—a preprocessing method to deal with missing values 285
Design rationale
On facilitating knowledge transfer in software design 391
Dialog
Making systems sensitive to the user's changing resource limitations 413

Ensemble classifier
Pruning boosted classifiers with a real valued genetic algorithm 277
Evaluation
Vanishing windows: an approach to adaptive window management 381
Events
Implementing ECA rules in an active database 137
Expert systems
Building a knowledge-efficient sanding advisor 145
ESSE: an expert system for software evaluation 183
An advanced integrated expert system for wastewater treatment plants control 355
Expertise transfer systems
On facilitating knowledge transfer in software design 391
Explanation
Strategic induction of decision trees 269

Formal concept analysis
An alternative verification and validation technique for an alternative knowledge representation and acquisition technique 55
Formal methods
Rule-based systems formalized within a software architectural style 13

Idea processors
Retrospective analysis for knowledge-based idea generation of new artifacts 333
Impact of knowledge-based systems
The organisational impact of knowledge-based systems: a knowledge perspective 159
Incomplete information
The efficient estimation of missing information in causal inverted multiway trees 101
Incompleteness
Approximate declarative semantics for rule base anomalies 341
Inconsistency
Approximate declarative semantics for rule base anomalies 341
Intelligent 3D visualization
Intelligent multi-shot 3D visualization interfaces 403
Intelligent User Interfaces
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Intent estimation
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Interface models
Towards a general computational framework for model-based interface development systems 433
Interpolation
Interpolation of plans for time-critical adaptation 171
Iteration
ACCELERE: a case-based design assistant for closed cell rubber industry 231

Java expert system shell
Internet-based decision support for evidence-based medicine 247

Knowledge acquisition
Knowledge modelling for a generic refinement framework 317
Knowledge base anomalies
Approximate declarative semantics for rule base anomalies 341
Knowledge base verification
Approximate declarative semantics for rule base anomalies 341
Knowledge based engineering
Design engineering—a need to rethink the solution using knowledge based engineering 257
Knowledge-based systems
COVERAGE: verifying multiple-agent knowledge-based systems 37
Large scale knowledge based systems for airborne decision support 215
Rule-based systems formalized within a software architectural style 13
Verifying ontological commitment in knowledge-based systems 45
Knowledge-based user interface design
Towards a general computational framework for model-based interface development systems 433
Knowledge engineering
Knowledge engineering issues in developing a case-based reasoning application 371
Knowledge refinement
Knowledge modelling for a generic refinement framework 317
Knowledge representation
Knowledge modelling for a generic refinement framework 317

Logical path graph
Applications of rule-base coverage measures to expert system evaluation 27

Machine learning
Strategic induction of decision trees 269
Using Hellinger distance in a nearest neighbour classifier for relational databases 363
Management
Vanishing windows: an approach to adaptive window management 381
Maximum Entropy
The efficient estimation of missing information in causal inverted multiway trees 101
Meeting
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Missing values
MVC—a preprocessing method to deal with missing values 285
Modelling
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Model-based interface development
Towards a general computational framework for model-based interface development systems 433
Motivation for the system
A web based CBR system for heating ventilation and air conditioning systems sales support 207
Multiple confuguration methods
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Multiple criteria decision aid
ESSE: an expert system for software evaluation 183

Nearest neighbour algorithm
Using Hellinger distance in a nearest neighbour classifier for relational databases 363
Neural networks
On mapping decision trees and neural networks 95

Object oriented
Design engineering—a need to rethink the solution using knowledge based engineering 257
Object oriented programming
Building a knowledge-efficient sanding advisor 145
Ontology
Verifying ontological commitment in knowledge-based systems 45
Organisational value of knowledge-based systems
The organisational impact of knowledge-based systems: a knowledge perspective 159

Page selection
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Pan and zoom
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Pconfig
PCONFIG: a Web-based configuration tool for Configure-To-Order products 223
Plan adaptation
Interpolation of plans for time-critical adaptation 171
Plausibility
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Preprocessing
MVC—a preprocessing method to deal with missing values 285
PRO clinical protocols
Internet-based decision support for evidence-based medicine 247
Probability
The efficient estimation of missing information in causal inverted multiway trees 101
Problem solving methodology
Case-based reasoning is a methodology not a technology 303
Production rule systems
Detecting redundancy among production rules using term rewrite semantics 3
Pruning
On mapping decision trees and neural networks 95
Pruning algorithm
Pruning boosted classifiers with a real valued genetic algorithm 277
Pruning boosted classifiers
Pruning boosted classifiers with a real valued genetic algorithm 277

Query language
CG-SQL: a front-end language for conceptual graph knowledge bases 293

Reasoning under uncertainty
The efficient estimation of missing information in causal inverted multiway trees 101
Redundancy
Detecting redundancy among production rules using term rewrite semantics 3
Approximate declarative semantics for rule base anomalies 341
Retrospective analysis
Retrospective analysis for knowledge-based idea generation of new artifacts 333
Rhetoric
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Ripple-down rules
An alternative verification and validation technique for an alternative knowledge representation and acquisition technique 55
Rotorcraft Pilot's Associate
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Rough set theory
An alternative verification and validation technique for an alternative knowledge representation and acquisition technique 55
Rule interestingness
On rule interestingness measures 309
Rule surprisingness
On rule interestingness measures 309
Rule-based system
Applications of rule-base coverage measures to expert system evaluation 27
Rule-based systems formalized within a software architectural style 13
Rules
Implementing ECA rules in an active database 137

Sand control
Building a knowledge-efficient sanding advisor 145
Scheduling in high schools
A conceptual model of knowledge-based time-tabling system 81
Simulation
Incorporating rhetorical and plausible reasoning in a system for simulating argumentation 113
Software architecture
Rule-based systems formalized within a software architectural style 13
Software design
On facilitating knowledge transfer in software design 391
Software engineering
Detecting redundancy among production rules using term rewrite semantics 3
Speech
Making systems sensitive to the user's changing resource limitations 413
Success of knowledge-based systems
The organisational impact of knowledge-based systems: a knowledge perspective 159
Symbol selection/declutter
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443

Technology demonstrator
Large scale knowledge based systems for airborne decision support 215
Term rewriting
Detecting redundancy among production rules using term rewrite semantics 3
Time pressure
Making systems sensitive to the user's changing resource limitations 413
Time-criticality
Interpolation of plans for time-critical adaptation 171

User interface development tools
Towards a general computational framework for model-based interface development systems 433
User interface
Vanishing windows: an approach to adaptive window management 381
User modeling
Making systems sensitive to the user's changing resource limitations 413
User profiles
Let's browse: a collaborative browsing agent 427

Validation and verification
Detecting redundancy among production rules using term rewrite semantics 3
Verfication
COVERAGE: verifying multiple-agent knowledge-based systems 37
Verifying ontological commitment in knowledge-based systems 45
Verification and validation
An alternative verification and validation technique for an alternative knowledge representation and acquisition technique 55

Wastewater treatment
An advanced integrated expert system for wastewater treatment plants control 355
Web based case-based reasoning system
A web based CBR system for heating ventilation and air conditioning systems sales support 207
Window location
The Rotorcraft Pilot's Associate: design and evaluation of an intelligent user interface for cockpit information management 443
Windows
Vanishing windows: an approach to adaptive window management 381
Working memory
Making systems sensitive to the user's changing resource limitations 413
